

MASTER Bus Shelter

professional maker

MASTER BUS SHELTER

TO CREATE VALUE SPACE

Different users, but same choice

Creating public transportation shelters with professional quality

Master - professional bus shelter

Master is committed to the original design of urban bus shelters. The design attaches great importance to the symbiotic relationship between bus shelters and urban spaces. There are different styles and forms of public service facilities in different countries, cities and environments, and our products can fully integrate the bus shelters into the surrounding environment. In this way, our product can accurately express the local natural and cultural characteristics, providing an innovative consumer experience. The value perceived by our users is much higher than the price they paid, and exceeds their expectations.

Leading the development direction of the industry

About the characteristics and functions of the bus shelters in Middle Eastern, South American, Southeast Asian, African, Central Asian and European styles:

The bus shelter can be regarded as an important channel for the city to show its characteristic culture to the outside world. It not only presents the city image and the citizen quality, but also reflects people's higher requirements for the living environment and life quality to a certain extent.

In response to the needs in different countries, different cities, and different spaces, there is the courage to make focus innovation of bus shelters. We will be more attentive to make you more assured!

Middle Eastern Style

Decorative style: Based on the traditional Islamic architectural form of the Arab nation, it is mainly in the ingenious design and unique decorative art.

South American Style

Decorative style: The creative choice of gorgeous colors gives people a visual impact. The exquisite and traditional pattern fully shows the charm of a wild and unrestrained life. The bus shelter always adopts a simple overall design and single color.

African Style:

Decorative style: Being good at taking traditional elements as the driving force of innovation, the new generation of African intellectuals have a much broader vision than their predecessors. The bus shelters in Africa are also in a distinctive style, with creative shapes showing firmness and ruggedness.

Southeast Asian Style

Decorative style: The design of bus shelters has strong national characteristics, without complicated decorative lines. A simple and pithy design is made to inject vitality into the whole city, while shows an aesthetic elegance and natural beauty, which is quite impressive for people.

Middle Eastern Style

I . Climate characteristics:

Located in a tropical desert climate, with high temperature throughout the year, dryness and little rain for many years, most of bus shelters in the Middle Eastern style are designed as a fully-enclosed space, with air-conditioning installed indoors to cool down and prevent the sun, sand and ultraviolet rays, etc.

II. Cultural characteristics:

People in the Middle East mainly believe in Islam, leaving the public the impression of “living in a completely different world.” Most people in this region like gold, not purple, while bus shelters in the UAE are more in brown.

III. Special materials: metal

South American Style

More information..., please visit our website: www.spacedg.com

I .Climate characteristics:

In the subtropical rainforest climate, there is plenty of sunshine. So, the bus shelters in South America often adopt a design of transparent and bright spatial shape with elegance, to welcome the brilliant light at any time and make people enjoy a bright and free life.

II. Cultural characteristics:

The proportion of people who believe in Christianity and Catholicism is relatively high in Latin America. Red is the favorite color of the locals, while black and purple are the taboo colors.

III. Special materials: metal, logs

African Style

More information..., please visit our website: www.spacedg.com

I .Climate characteristics:

The climate is characterized by high temperature, little rain, and dryness in many areas. Generally speaking, the bus shelters in Africa are relatively rough.

II. Cultural characteristics:

There are many countries in African with different national conditions and various cultures. Different tribes have different languages, different customs, and different religious beliefs. And relatively, the African is economically underdeveloped. In view of the above major reasons, the bus shelters in African countries are almost in a combination of a small amount of steel structure and a large block of wood.

III. Special materials:Wood, metal, stone

Southeast Asian Style

More information..., please visit our website: www.spacedg.com

I . Climate characteristics:

It is in a humid tropical climate with strong solar radiation, high temperature, low pressure, spring-like weather all the year round, and heavy annual rainfall. In response to the special climate of Southeast Asia, the most important function of the bus shelter focuses on the combination of sunshading, rain protection, waiting for the bus and leisure, which gives people a sense of closeness to nature.

II. Cultural characteristics:

Southeast Asia is a tourist destination. Because Southeast Asian countries have been historically influenced by Western society, and there is a strong oriental culture, a lot of elements in Buddhist culture can be found there.

III. Special materials: metal, wood, rattan

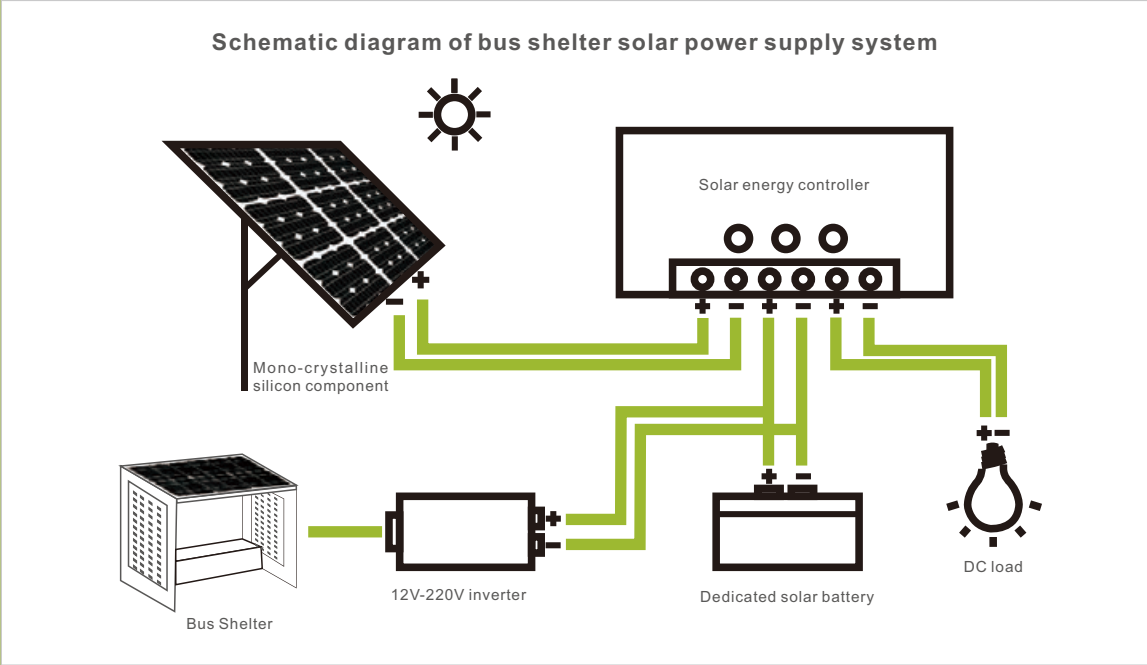

SOLAR POWER SOLUTIONS

Use energy-saving products to lead the advertising industry trend

“MASTER” bus shelter is a brand dedicated to value. Wholly based on technology, process, design, and materials, we at Space seek to improve ourselves and actively adapt to the changing environment. We carry out professional assessments based on local conditions and on the basis of the location and distance of customer bus shelter and the wiring complexity, in order to provide them with solutions in response to changing environments.

With the extensive development of solar technology, a lot of outdoor equipment is now being powered by solar energy. This is a truly green, eco-friendly, and recyclable form of energy. In addition to zero air pollution, zero noise, and zero damage to the environment, it has the following four advantages:

Green and Eco-friendliness

Energy-saving solar energy bus shelter converts sunlight into electricity and thus saves a massive amount of energy. It helps to protect the environment while creating value for customers.

Ease of Installation

Mount the mono-crystalline silicon solar panel on the top of the bus shelter and the inside equipment will working. There is no need for additional cables and wires, making operation and maintenance very easy.

Reliability and Safety

The components of the solar cell set are reliable. Compared with electricity produced by the city grid, Energy-saving solar energy shows a better power. It does not require manual operation after installation, but runs reliably and is very durable.

Excellent Price/Performance Ratio

It features higher power-generation efficiency, large power storage capacity, and an excellent depth of discharge. Under normal circumstances, it can still provide electricity for operation even during successive rainy days. It comes at a reasonable price for its excellent performance, quality, and reputation. This product is most certainly the best choice at a time when we pursue product excellence.

COMPETITIVE ADVANTAGES

I. **Cost:** Space is based in Dongguan, a global manufacturing hub, with access to a reliable supply of high-quality raw materials and a mature supplier network, enabling it to adapt to constantly changing customer requirements and reduce costs.

II. **Experience:** Last 15 years, Space has been specialized in custom-building high-end advertising media equipment such as Bus Shelter, Trivision billboards, advertising light boxes, and Unipole billboard. We meet the most important requirements of our customers with the leanest team, the most rational product process, and the most timely assurance measures.

III. **Quality:** Space are well-known for our excellent quality assurance system. Strictly following the ISO requirements, all our employees are highly customer-focused, and meet the high standards and strict requirements needed to ensure that perfect products are delivered at the highest quality.

IV. **Reputation:** Space have a development strategy “based in Dongguan, from which to expand nationwide and go global”. For the past 15 years, our products have been very popular with both domestic and overseas customers, especially our Bus Shelter, Trivision billboards and advertising light boxes, which have been sold to more than 100 countries and regions.

V. **Service:** with many years of experience in the advertising market, Space have successfully converted the traditional service awareness concept into a total service system that is implemented throughout all of our market operations processes. We have solved customers’ actual problems through pre-sales information service, in-sales professional guidance and quality assurance, and after-sales customer visits and follow-up, ensuring that they remain worry-free in conducting their business.

VI. **Brand:** Space keep on improving ourselves, and actively adapt to the changing environment so that our products and services can create more practical value and have a wider scope of application and better application scenarios. We own the following brands: MASTER Bus Shelter; TOP advertising Light Box; FIRST Trivision Billboard; GOLD Unipole Billboard. Our products are an excellent combination of quality with price and of service with speed. We meet customer requirements through systematic thinking and by improving our overall level of service. We enable customers to experience “making money while staying worry-free and happy!”, and in this way can realize our own brand value and meaning.
